PROFESSIONAL SUMMARY

Frontend-focused full-stack developer with 4 years building production web and mobile apps in EdTech, creator economy, and fashion-tech. Skilled in Next.js, React Native, TypeScript, and Zustand, with backend experience in Node.js and Express: authentication flows and REST API endpoints built end to end. Integrated Stripe, Flutterwave & Paystack payments, WebSocket chat, OpenAI streaming, and Polygon blockchain UIs. Deliver complex features end-to-end while collaborating with designers, backend engineers, and smart contract developers in remote teams.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React.js, React Native, Next.js, Expo
Styling & State: Tailwind CSS, SCSS, Responsive Design, Redux, Zustand, TanStack Query
Backend & APIs: Node.js, Express, REST API design, Authentication & Authorization (JWT, OAuth, sessions), GraphQL, Supabase, Firebase, PostgreSQL, MySQL, AWS S3
Web3 & Payments: Thirdweb SDK, Ethers.js, Wagmi, Smart Contract Integration, Paystack, Flutterwave, Stripe
Tools & Practices: Git, GitHub, Docker, Postman, Figma, Jest, Cypress, CI/CD (GitHub Actions, Firebase Hosting), Cross-Browser Compatibility, SEO Optimization

PROFESSIONAL EXPERIENCE

Lead Frontend Developer

KDN Group LLC, New York, United States (Remote) | Jan 2026 – Aug 2026

- Led frontend development across three KDN products (KDN News, Fufu Planet, KDN Ads Manager), consistently using Next.js, TypeScript, and Zustand to standardize state management and auth patterns across projects.
- Owned end-to-end authentication systems for each platform, including Google OAuth, universal login with role-based fallback, and session/token refresh, resolving critical bugs that caused unexpected logouts.
- Built backend authentication with Node.js and Express, creating the auth flow endpoints end to end alongside all related API endpoints, and connecting them to the frontend; used Docker for containerized setups.
- Integrated Stripe and Paystack for subscription billing, building out webhook handling, the billing portal, and plan management flows to support recurring advertiser payments.
- Built and maintained full API integration layers (billing, subscriptions, reporting, creatives, content CRUD) using TanStack Query and Axios, correcting type mismatches against live backend responses.
- Delivered platform UI work end-to-end, from admin panels and dashboards to a public-facing landing page, while migrating one legacy app off Vite/Redux onto the shared modern stack.

Frontend Developer

Astra, London, United Kingdom (Remote) | June 2025 – June 2026

- Integrated Paystack's payment API with Next.js and TypeScript, configuring webhook callbacks for payment verification, enabling 100+ users to purchase credits.
- Built a streaming OpenAI chat interface where creators describe fashion briefs conversationally, with results posted directly to the job board.
- Developed a full job board with listing cards, detail pages, and application flows featuring infinite scroll and skeleton loading.
- Implemented a WebSocket real-time chat system, refactoring from role-based to user-based architecture for creator-to-tailor communication.
- Built the complete escrow UI on Polygon using ThirdWeb and RainbowKit, integrating Solidity smart contracts for milestone creation, deposits, and releases.
- Migrated state and auth from Context API to Zustand, added app-wide error boundaries and skeleton loading, and improved render performance and security.
- Worked on the database layer with Supabase and MySQL, and used Docker for containerized development and deployment setups.

Frontend Developer

Prep Beta Solutions, Lagos, Nigeria (Remote) | *Aug 2023 – May 2025*

- Debugged and refactored a legacy Next.js codebase for scalability and maintainability, unblocking faster feature delivery on a WAEC and JAMB exam-prep platform.
- Revamped the marketing landing page using Next.js and Tailwind CSS, improving responsiveness across desktop, tablet, and mobile with the design team.
- Integrated RESTful APIs to power question banks, test score analysis, and progress tracking with loading states, error handling, and caching strategies.
- Built reusable, modular UI components with Next.js, SCSS, and Tailwind CSS, reducing code duplication and improving consistency across the codebase.

Frontend Developer

Tiffany Berth School, Kwara, Nigeria (Contract) | *Sept 2022 – July 2023*

- Built responsive interfaces for the school's website and academic platforms (admissions portal, announcements dashboard, faculty directory) using React.js, reducing page load from 8s to 4s and achieving a 95+ Lighthouse mobile score.

EDUCATION

Diploma in Frontend Engineering — AltSchool Africa, Lagos | Apr 2022 – Jul 2023

Bachelor of Science in Agriculture — University of Ilorin, Kwara | Nov 2017 – Oct 2023
